Dermatomes Anatomy: Overview, Gross Anatomy, Natural Variants

The popliteal fossa (sometimes referred to as the hough [1], or kneepit in analogy to the armpit) is a shallow depression located at the back of the knee joint. The bones of the popliteal fossa are the femur and the tibia. Like other flexion surfaces of large joints (groin, armpit, cubital fossa and essentially the anterior part of the neck), it is an area where blood vessels and nerves pass ...

External female genitalia: Anatomy and blood supply | Kenhub

The human body is the structure of a human being. It is composed of many different types of cells that together create tissues and subsequently organ systems. Thoracic cage: Anatomy and clinical notes | Kenhub

External female genitalia are a part of the female reproductive system, and include: mons pubis, labia majora, labia minora, clitoris, vestibule, hymen, vestibular bulb and vestibular glands.. Components of the external female genitalia occupy a large part of the female perineum and together they are called the vulva. The functions of the external female genitalia are many, such as reproduction ...

Research Design: Qualitative, Quantitative, and Mixed ...

Pneumothorax is defined as the presence of air or gas in the pleural cavity (ie, the potential space between the visceral and parietal pleura of the lung). The clinical results are dependent on the degree of collapse of the lung on the affected side.

Gluteus Maximus - Physiopedia

The trendelenburg gait is caused by a unilateral weakness of the hip abductors, mostly the gluteal musculature. This weakness could be due to superior gluteal nerve damage or in 5th lumbar spine lesion. This condition makes it difficult to support the body's weight on the affected side. During normal gait, both lower limbs bear half of the body weight is some part of stance phase.

Popliteal fossa - Wikipedia

The thoracic cage (rib cage) is the skeleton of the thoracic wall. It is formed by the 12 thoracic vertebrae, 12 pairs of ribs and associated costal cartilages and the sternum.. The thoracic cage takes the form of a domed bird cage with the horizontal bars formed by ribs and costal cartilages. It is supported by the vertical sternum or breastbone (anteriorly) and the 12 thoracic vertebrae ...
