but there are also weaknesses on both of these fronts that must be attended to for this research area to continue to make progress.

Effects of Color on Emotions - Semantic Scholar
According to Angela Wright (1998, p. 23), the psychology of color works as follows: When light strikes the eye, each wavelength does so slightly differently. Red, the longest wavelength, requires the most adjustment to look at it, and therefore appears to be nearer than it is, while green requires no adjustment whatever, and is therefore restful.
