Programming the SQL Way with Common  
Table Expressions

A common table expression, or CTE, (in  
SQL) is a temporary named result set,  
derived from a simple query and defined  
within the execution scope of a SELECT,  
INSERT, UPDATE, or DELETE  
statement. CTEs can be thought of as  
alternatives to derived tables , views, and  
inline user-defined functions.

Is a valid identifier for the common table expression. expression\_name must be different from the name of any other common table expression defined in the same WITH <common\_table\_expression> clause, but expression\_name can be the same as the name of a base table or view.

Hierarchical and recursive queries in SQL  
- Wikipedia

A common table expression is a named temporary result set that exists only within the execution scope of a single SQL statement e.g., SELECT, INSERT, UPDATE, or DELETE. Similar to a derived table, a CTE is not stored as an object and last only during the execution of a query.

WITH common\_table\_expression  
(Transact-SQL) - SQL Server ...

Common Table Expressions or CTE's for short are used within SQL Server to simplify complex joins and subqueries, and to provide a means to query hierarchical data such as an organizational chart. In this set of articles, we'll introduce you to common table expressions, the two types, and their uses.
