fijo de segmentos anteriores, de la misma manera que en otros «animales heterónomamente segmentados». En algunos casos los segmentos o una porción de los segmentos desaparecen.

Comparative Vertebrate Anatomy Hyman Libbie

The human head is an anatomical unit that consists of the skull, hyoid bone and cervical vertebrae. The term "skull" collectively denotes the mandible (lower jaw bone) and the cranium (upper portion of the skull that houses the brain). [clarification needed (The skull can also be described as being composed of the cranium, which encloses the cranial cavity, and the facial skeleton (includes ...

Head - Wikipedia

The spinal column, characteristic of each vertebrate species, [vague] is a moderately flexible series of vertebrae (singular vertebra), each constituting a characteristic irregular bone whose complex structure is composed primarily of bone, and secondarily of hyaline cartilage. They show variation in the proportion contributed by these two tissue types; such variations correlate on one hand ...
