According to the site Math Planet, "A compound inequality contains at least two inequalities that are separated by either "and" or "or". In the case of "and", a compound inequality such as: $x > -1$ and $x < 2$. can also be written as: $-1 < x < 2$. (I also took this example from Math Planet.) There is no such shortcut for the "or" case.

Solve each compound inequality and graph its solution.
A compound inequality contains at least two inequalities that are separated by either "and" or "or". The graph of a compound inequality with an "and" represents the intersection of the graph of the inequalities. A number is a solution to the compound inequality if the number is a solution to both inequalities.

Solving Compound Inequalities. n our last lesson, you were introduced to compound inequalities. In this lesson, we are going to take the next step and begin solving compound inequalities. Hopefully you have studied our lesson on solving regular inequalities. If so, I think you'll find this lesson to be pretty easy.

Compound Inequalities Answers
A compound inequality would be a combination of two or more inequalities, combined with AND or with OR. This can be implied, as in $2 < x < 5$, which means: $2 < x$ AND $x < 5$.

Find the range of numbers that make this true.

Solve each compound inequality and graph its solution.
The solutions for inequalities generally involve the same basic rules as equations. There is one exception, which we will soon discover. The first rule, however, is similar to that used in solving equations. If the same quantity is added to each side of an inequality, the results are unequal in the same order. Example 1 If $5 < 8$, then $5 + 2 < 8 + 2$.

Compound Inequalities is a method to find the variable value for the given compound inequalities. The two inequalities would be joined by the word 'and' or 'or'. It is presented in a number line. When the arrow points away from each other in the number line, then the inequalities are joined by 'and', if arrow points on same direction ...

Compound Inequalities. To solve a compound inequality, first separate it into two inequalities. Determine whether the answer should be a union of sets ("or") or an intersection of sets ("and"). Then, solve both inequalities and graph. If it is unclear whether the inequality is a union of sets or an intersection of sets...
