Respiratory system - Unionpedia, the concept map

The respiratory cycle consists of inspiration (breathing in), expiration (breathing out) and a very short respiratory pause. In normal adult breathing rate is 12-18 breaths per minute. A newborn breathes 60 times per minute. It is always 4-5 times less than heart rate. Slight increase in CO₂ content in blood increases breathing rate.

Respiratory Cycle - api.simply.science

The main structures of the human respiratory system are the nasal cavity, the trachea, and lungs. All aerobic organisms require oxygen to carry out their metabolic functions. Along the evolutionary tree, different organisms have devised different means of obtaining oxygen from the surrounding atmosphere.
