Heart failure is measured by ejection fraction.

Nursing concept maps for chf -
SimonGrier1's blog

Congestive heart failure (CHF) otherwise known as cardiac failure refers as the inability of the heart to pump sufficient blood to meet needs of tissues for oxygenation and nutrition. This disease can affect the heart's ability to respond to circulation demands of the body. CHF is a slowly developing condition where cardiac output is lower-than-normal.

Nursing Care Plan for Congestive Heart Failure (CHF) - NRSNG

Heart failure—Definition. Heart failure is a syndrome in which structural or functional cardiac conditions impair heart's ability to supply sufficient blood flow in order to meet the body's needs, or to do that at an elevated diastolic pressure[.].. There are many definitions of this complex syndrome, but none is satisfactory, due to the lack of a universally agreed definition and challenges ...
