A connected car is a car that can communicate bidirectionally with other systems outside of the car. This allows the car to share internet access, and hence data, with other devices both inside and outside the vehicle. For safety-critical applications, it is anticipated that cars will also be connected using dedicated short-range communications radios, operating in the FCC-granted 5.9 GHz band with very low latency. Both the U.S. and EU scenarios concentrate on 5.9 GHz communications, however, t

Vehicle-to-vehicle (V2V) communication enables vehicles to wirelessly exchange information about their speed, location, and heading. The technology behind V2V communication allows vehicles to broadcast and receive omnidirectional messages (up to 10 times per second), creating a 360-degree "awareness" of other vehicles in proximity.
