Convective Heat Transfer - Engineering ToolBox

Convective heat transfer, often referred to simply as convection, is the transfer of heat from one place to another by the movement of fluid. Convection is usually the dominant form of heat transfer in liquids and gases. Although often discussed as a distinct method of heat transfer, convective heat transfer involves the combined processes of unknown conduction and advection.

of heat losses from the structure due to convection and radiation is a complex problem. The convective and radiative heat transfer between surface and the hot fluid adjacent to it are coupled and none of the heat transfer modes could be evaluated separately. The presence of heat transfer affects the velocity

Introduces engineering heat transfer, based on the development of an inductive approach to the formulation and solution of applied problems. Emphasis is on problem formulation. Coverage progresses from foundations of heat transfer through different types of conduction and heat exchangers, foundations and different types of radiation, and phase exchange.

Convection Heat Transfer: Vedat S. Arpaci, Poul S. Larsen ...

Thus from a conceptual viewpoint, convection is not a basic mode of heat transfer. Instead, it occurs by a combined effect of conduction (and radiation) and the motion of the transmitting medium. Nevertheless, convection plays a very important role in fires.
