astronomy naap answer cosmic distance ladder - Bing
At the end of June, astronomers identified a quasar that is now believed to be the earliest and most distant known object in the universe. But distances to celestial bodies haven't always been easily determined – less than a century ago it was thought that our galaxy was the entire extent of the universe.

The cosmic distance ladder - What's new
By extending the ladder with different kinds of measurements (and intelligent guesses), we can measure larger and larger distances in the universe. Several of these steps are critically dependent upon variable stars, and the physical study of the Distance Ladder is in some ways a physical study of variable
