Die Evolution wurde bereits im 19. Jh. als Tatsache akzeptiert. Verschiedene Theorien erklären Entstehung, die Entwicklung und die Vielfalt der Lebewesen auf natürliche, d. h. physikalisch-chemische Weise. Grundsätzlich wird der Begriff Darwinismus verwendet, um den Inhalt von Darwins Origin of Species von anderen Evolutionstheorien zu unterscheiden, beispielsweise von nach Lamarck ...

Charles Darwin: Evolution and the story of our species

Charles Darwin's observations on the development of his children, began the research that culminated in his book The Expression of the emotions in man and animals, published in 1872, his article 'A biographical sketch of an infant', published in Mind in 1877. As early as 1839 Darwin had begun to collect information on the behaviour of infants from his relatives with young families.

Evolution in organisms occurs through changes in heritable traits—the inherited characteristics of an organism. In humans, for example, eye colour is an inherited characteristic and an individual may inherit the "brown-eye trait" from one of their parents. Inherited traits are controlled by genes. The complete set of genes within an organism's genome (genetic material) is called its ...

This article covers the time period from November 1859 to April 1861. The immediate reaction to the Origin of Species, the book in which Charles Darwin described evolution by natural selection, included international debate, though the heat of controversy was less than that over earlier works such as Vestiges of Creation. Darwin monitored the debate closely, cheering on Thomas Henry Huxley ...

Darwins Dangerous Idea Evolution And

Darwin's Dangerous Idea: Evolution and the Meanings of Life is a 1995 book by the philosopher Daniel Dennett, in which the author looks at some of the repercussions of Darwinian theory. The crux of the argument is that, whether or not Darwin's theories are overturned, there is no going back from the dangerous idea that design (purpose or what something is for) might not need a de

It will help to begin by clarifying some terminology. Evolution is simply "change over generational time" (Brandon, 1990, p. 5). Change to a trait can occur because of natural selection, chance drift, or because the trait is genetically linked with some other trait. A trait is an adaptation if produced by natural selection.
