Static SQL applications For most DB2 users, static SQL provides a straightforward, efficient path to DB2 data. Dynamic SQL applications With dynamic SQL, DB2 prepares and executes the SQL statements within a program while the program is running. Dynamic SQL is a good choice when you do not know the format of an SQL statement before you write or run a program.

This IBM Redbooks publication describes the major enhancements that affect application programming when accessing DB2 data on a S/390 or zSeries platform, including the object-oriented extensions such as triggers, user-defined function and user-defined distinct types, the usage of temporary tables, savepoints and the numerous extensions to the SQL language, to help you build powerful, reliable and scalable applications, whether it be in a traditional environment or on an e-business platform.

COBOL-DB2 applications are those applications that include both COBOL and DB2. Embedded SQL statements work like normal SQL statements with some minor changes. For example, the output of a query is directed to a predefined set of variables which are referred as Host Variables. An additional INTO clause is placed in the SELECT statement.
