maintained as a collection of operating system files, or stored in a DBMS (database management system). The advantages of using a DBMS are: Data independence and efficient access.

Dbms korth solutions - SlideShare

Answer: Some main differences between a database management system and a file-processing system are: · Both systems contain a collection of data and a set of programs which access that data. A database management system coordinates both the physical and the logical access to the data, whereas a file-processing system coordinates only the physical access.
