Saturated Solution. In chemistry, after studying solutions and properties of solution, one can understand that a solution can reach a status of saturation. This state is when the solution has reached a point in which no more solute can be added. Addition of solute after this point would result in a solid precipitate or a gas being released.

Define Unsaturated Solution In Chemistry

In chemistry, an unsaturated solution consists of solute completely dissolved in solute. If no additional solute can dissolve in a solution, that solution is said to be saturated. Solubility depends on temperature. Raising the temperature of a solution may even turn a saturated solution into an unsaturated one.

What Is an Unsaturated Solution in Chemistry?
