How Do Desert Plants Adapt to Their Environment? | Sciencing

Despite the variations in the environment of different deserts, it is correct to say that all desert animals have to cope with water shortage, and animals living in hot deserts cope with extremely high daytime T a. Physiological problems linked to high T a are those associated with hyperthermia.

Deserts - Exploring Extreme Environments

Desert environments are so dry that they support only extremely sparse vegetation; trees are usually absent and, under normal climatic conditions, shrubs or herbaceous plants provide only very incomplete ground cover.

Animals at the extremes: The desert environment: 1 The ...

Precipitation, or lack of, is the driving abiotic factor in desert environments. As deserts receive very little rain they are dry, dusty environments and are only inhabited by tough, drought tolerant organisms. A desert averages less than 250 mm of rain per year and the lack of rain drives the formation of desert ecosystems.
