These concepts can be very difficult for students to understand. In order to give them a view of how diffusion works with a semipermeable membrane, I like to do a lab that uses a plastic bag to model the cell (membrane). It is a simple lab where students do very little except watch the process and record data and information.

New York State Required Labs – Review Diffusion Through A

...

Diffusion is a process that allows ions or molecules to move from where they are more concentrated to where they are less concentrated. This process accounts for the movement of many small molecules across a cell membrane. Diffusion is the process by which cells acquire food and exchange waste products.

Read Online Diffusion Through Membrane Lab Answers

Molecules are constantly moving. They move in straight lines unless they are deflected by other molecules or obstacles in their environment. Diffusion is the process by which the collisions between molecules cause them to continually spread apart from each other.

jenniferorlandoteachingportfolio.weebly.com

part 2—Diffusion Of Water Across a Membrane (Osmosis) Osmosis is a special type of diffusion. Specifically, it is the diffusion of water across a membrane. Osmosis is a very important process because it enables cells to maintain the proper water balance.
