Some graphs occur frequently enough in graph theory that they deserve special mention. One such graphs is the complete graph on n vertices, often denoted by K_n . This graph consists of n vertices, with each vertex connected to every other vertex, and every pair of

The two discrete
structures that we will
cover are graphs and
trees. A graph is a set of
points, called nodes or
vertices, which are
interconnected by a set
of lines called edges.

more specifically in graph theory, a graph is a structure amounting to a set of objects in which some pairs of the objects are in some sense "related". The objects correspond to mathematical abstractions called vertices and each of the related pairs of vertices is called an edge.

Typically, a graph is
