This book explores complexity theory and systems thinking to understand better how complex systems drift into failure. It studies sensitive dependence on initial conditions, unruly technology, tipping points, diversity - and finds that failure emerges opportunistically, non-randomly, from the very webs of relationships that breed success and that are supposed to protect organizations from disaster.

Sydney Dekker's Drift Into Failure* is a noteworthy effort to provide new insights into how accidents and other bad outcomes occur in large organizations. He begins by describing two competing world views, the essentially mechanical view of the world spawned by Newton and Descartes (among others), and a view based on complexity in socio-technical organizations and a systems approach.
