combinations of drugs), or it may aim to prolong life or to reduce symptoms (palliative chemotherapy).

UpToDate

Intravenous therapy (IV) is a therapy that delivers fluids directly into a vein. The intravenous route of administration can be used both for injections, using a syringe at higher pressures; as well as for infusions, typically using only the pressure supplied by gravity. Intravenous infusions are commonly referred to as drips.. The intravenous route is the fastest way to deliver medications and ...
