Definition. The need to distinguish between the various meanings of "frame of reference" has led to a variety of terms. For example, sometimes the type of coordinate system is attached as a modifier, as in Cartesian frame of reference. Sometimes the state of motion is emphasized, as in rotating frame of reference. Sometimes the way it transforms to frames considered as related is emphasized as ...

A Absolute electrode potential in electrochemistry, according to an IUPAC definition, is the electrode potential of a metal measured with respect to a universal reference system (without any additional metal-solution interface). Absolute pressure Is zero-referenced against a perfect vacuum, using an absolute scale, so it is equal to gauge pressure plus atmospheric pressure.

The work hardening exponent, or n-value, of a material is a measure for how quickly the material gains strength when it is being deformed. The n-value can be obtained from the slope of the true stress versus true strain curve in a tensile test, plotted on a logarithmic scale (see Fig. 3.7). The relationship stress and strain can be expressed in an equation:
