In a single-crystal X-ray diffraction measurement, a crystal is mounted on a goniometer. The goniometer is used to position the crystal at selected orientations. The crystal is illuminated with a finely focused monochromatic beam of X-rays, producing a diffraction pattern of regularly spaced spots known as reflections.

X-ray diffraction is stressed rather than metallurgy. The book is divided into three main parts -Fundamentals; experimental methods; and applications. The subject of crystal structure is approached through, and, based on, the concept of the point lattice (Bravais lattice), because the point lattice
