Embedded Systems: Architecture, Programming And Design 2nd Edition Raj Kamal

What the embedded systems architecture model shows is that all embedded systems proportion one similarity at the very best degree; that is, all of them have a minimum one layer (hardware) or all layers (hardware, device software and alertness software) into which all additives fall. The hardware layer consists of all the important physical components placed on an embedded board, whereas the system and alertness software layers incorporate all of the software program placed on and being ...
