Where, r is the base radius, h is the height and l is the slant height of the cone.. Derivation: In order to calculate the curved surface area and total surface area of a cone, we divide it into a circular base and the top slanted part.The area of the slanted part gives you the curved surface area.

Multiple (Linear) Regression: Formula, Examples and FAQ
A normal distribution. A normal distribution, sometimes called the bell curve (or De Moivre distribution [1]), is a distribution that occurs naturally in many situations.For example, the bell curve is seen in tests like the SAT and GRE. The bulk of students will score the average (C), while smaller numbers of students will score a B or D. An even smaller percentage of students score an F or an A.

Empirical Probability - Definition, Formula, Problems and Examples - BYJUS
The empirical formula of a compound represents the simplest whole-number ratio between the elements that make up the compound. This 10-question practice test deals with finding empirical formulas of chemical compounds. A periodic table will be required to complete this practice test. Answers for the test appear after the final question:

Equality - Stanford Encyclopedia of Philosophy

The viscosity of a fluid is a measure of its resistance to deformation at a given rate. For liquids, it corresponds to the informal concept of "thickness": for example, syrup has a higher viscosity than water. Viscosity quantifies the internal frictional force between adjacent layers of fluid that are in relative motion. For instance, when a viscous fluid is forced through a tube, it flows ...

Here, we will study the pH value formula, and how pH value is calculated in detail. pH Formula Chemistry. The pH scale, which normally spans from 0 to 14 in water, is used to determine the pH of an aqueous solution. A pH of 7 is regarded as neutral. Acidity is defined as a pH of less than 7. A pH of more than 7 is classified as basic.

Definitions. A propositional logic formula, also called Boolean expression, is built from variables, operators AND (conjunction, also denoted by), OR (disjunction,), NOT (negation, ¬), and parentheses.A formula is said to be satisfiable if it can be made TRUE by assigning appropriate logical values (i.e. TRUE, FALSE) to its variables. The Boolean satisfiability problem (SAT) is, given ...
