Flat engine - Wikipedia
An internal combustion engine (ICE) is a heat engine where the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

Did you know that your car will take in 20,000 cubic feet of air to burn 20 gallons of fuel? That's the equivalent of a 2,500 sq. ft. house! If your only experience with a car engine's inner workings is "How much is that going to cost to fix?" this graphic is for you. Car engines are astoundingly aw

Animated Engines - Home
An engine or motor is a machine designed to convert one form of energy into mechanical energy. Heat engines, like the internal combustion engine, burn a fuel to create heat which is then used to do work. Electric motors convert electrical energy into mechanical motion, pneumatic motors use compressed air, and clockwork motors in wind-up toys use elastic energy.

Engine - Wikipedia

Engine Block (Cylinder Block) The engine block is the foundation of an engine. Most engine blocks are cast from an aluminum alloy, but iron is still used by some manufacturers. The engine block is also referred to as the cylinder block because of the big hole or tubes called cylinders that are cast into the integrated structure.
