peugeot ECU Driver IC replacement

This water damaged ECU is a very common failure for Peugeot 206 & 207 vehicles built between 2005 and 2011, the common issue is coolant contamination into the wiring harness that travels via 'capillary action' up to the plug of the ECU, once the water from the coolant system reaches the ECU it causes the ECU terminals to corrode causing open circuits for various sensors and actuators, this ...

Peugeot 206 immobiliser fault - BBA Reman

Peugeot 206 U1113 Possible Solution :

The crankshaft sensor signals the fuel injection computer or the ignition control when the cylinders are firing. This causes the ignition coil to provide a spark and the injector to inject fuel into each cylinder at the right time. If either sensor isn't working correctly, the car will run rough and the engine will be less efficient.
