Engine Mpfi

Fuel injection is the introduction of fuel in an internal combustion engine, most commonly automotive engines, by the means of an injector.. All diesel engines use fuel injection by design. Petrol engines can use gasoline direct injection, where the fuel is directly delivered into the combustion chamber, or indirect injection where the fuel is mixed with air before the intake stroke.

How does MPFI engine works?

- indiastudychannel.com

Multi point fuel injection (MPFI) is a technique of fuel injection in petrol (or gasoline) engines. Note: Petrol (or gasoline) engines are sometimes also known as spark ignition (SI) engine . In general, a petrol engine uses carburetor to mix air and fuel but it has poor response acceleration and deceleration.

zones.

Multi Point Fuel Injection (MPFI) | CarTrade Blog
The MPFi uses separate injector for each cylinder to supply the correct quantity of fuel via a 'fuel-rail' according to the 'Firing Order' or in a 'particular sequence'. Also, MPFi system provides further precision by varying the fuel quantity and injection timing by governing each injector separately. It thereby improves the performance and controls the emissions effectively.
