Plate tectonics vary elsewhere in the Solar System. Signs have been found on Mars (34) - Vallis Marineris, and the Tharsis Bulge and Olympus Mons (the largest volcano in the Solar System). Mars is no longer geologically active; on Venus, there are also signs of geological activity (35) but not plate tectonics as we understand them on Earth.

Environmental Science Investigation Plate Tectonics Key to Investigation 2: Plate Tectonics. 1a. All three phenomena mostly appear concentrated on continental edges, but this effect is secondary. They are actually on plate boundaries. The edges of the continental margins are either active plate boundaries, such as the West Coast of the US, or they are passive margins such as the East Coast of the US.
