Rickets | Radiology Reference Article | Radiopaedia.org

Spectrum of Soft-Tissue Lesions. Soft tissue arises from the mesenchyme, which differentiates during development to become fat, skeletal muscle, peripheral nerves, blood vessels, and fibrous tissue (). Soft-tissue tumors are histologically classified on the basis of the soft-tissue component that comprises the lesion, but this does not imply that the tumor arises from that tissue ().

Tuberculosis (TB) is an infectious disease usually caused by Mycobacterium tuberculosis (MTB) bacteria. Tuberculosis generally affects the lungs, but can also affect other parts of the body. Most infections do not have symptoms, in which case it is known as latent tuberculosis. About 10% of latent infections progress to active disease which, if left untreated, kills about half of those affected.

X-rays make up X-radiation, a form of high-energy electromagnetic radiation. Most X-rays have a wavelength ranging from 0.03 to 3 nanometres, corresponding to frequencies in the range 30 petahertz to 30 exahertz (3×10¹⁶ Hz to 3×10¹⁹ Hz) and energies in the range 100 eV to 200 keV. X-ray wavelengths are shorter than those of UV rays and typically longer than those of gamma rays.
