The exhaust gas recirculation (EGR) valve helps your car more efficiently and completely burn the car's fuel by recirculating a portion of your exhaust and running it through the combustion process again.

Repair Guides - AutoZone

The exhaust gas recirculation valve, or EGR valve, recirculates the exhaust gasses in the Isuzu Rodeo for more complete burning. The valve itself opens and closes to allow the exhaust gases to be burned more thoroughly. However, when the valve stops opening on the exhaust cycle, then you may notice the engine idle drop.
