where n is any interger. But, I want to learn how to get that answer, any help is greatly appreciated!

find all the solution for the equation

The exact value of is. The sine function is negative in the third and fourth quadrants. To find the second solution, subtract the solution from, to find a reference angle. Next, add this reference angle to to find the solution in the third quadrant.

CDE eLicensing System

View Colorado Workforce Centers in a full screen map. All Colorado Workforce Centers are closed on government holidays, which may include the following: New Year's Day, Martin Luther King, Jr. Day, President's Day, Memorial Day, Independence Day, Labor Day, Columbus Day, Veterans Day, Thanksgiving and Christmas Day.

How to Find All Real Solutions of an Equation | Sciencing

Asking you to find the zeroes of a polynomial function, y equals (polynomial), means the same thing as asking you to find the solutions to a polynomial equation, (polynomial) equals (zero). The zeroes of a polynomial are the values of x that make the polynomial equal to zero. Either task may be referred to as "solving the polynomial".

Find all solutions? $\sec 4x - 2 = 0$? | Yahoo Answers

Precalculus. Solve for $\tan(x) = 0$ To find the second solution, add the reference angle from to find the solution in the fourth quadrant. Add and . Find the period. Tap for more steps... The period of the function can be calculated using . Replace with in the formula for period.

Find All Solutions

Frequently, in Algebra class, you will be called to find all "real solutions" of an equation. Such questions essentially are asking you to find all solutions of an equation, and should any imaginary solutions (containing the imaginary number 'i') come up, to discard these solutions.

Google

The two real solutions of this equation are 3 and -3. The two complex solutions are 3i and -3i. To solve for the complex solutions of an equation, you use factoring, the square root property for solving quadratics, and the quadratic formula. Sample questions. Find all the roots, real and complex, of the equation $x^3 - 2x^2 + 25x - 50 = 0$.

Solving Polynomials: How-to | Purplemath

You can put this solution on YOUR website! Find all real number solutions of the equation algebraically: $\sqrt{2x+1} - \sqrt{x+1} = 2$ Can someone show me how to solve the problem by first isolating $\sqrt{2x+1}$ on the left side of the equation and then squaring each side?

Solving Equations with Complex Solutions - dummies

Take the inverse tangent of both sides of the equation to extract from inside the tangent. The exact value of θ is. The tangent function is positive in the first and third quadrants. To find the second solution, add the reference angle from θ to find the solution in the fourth quadrant.
