spawning in hatcheries. The role of the hatchery is very different from farm (Numbers of appropriate size). Water temperature and light are very important in hatchery practices (fish are cold blooded animals). Therefore, optimum range for reproduction falls

Hatchery 17

A fish hatchery is a place for artificial breeding, hatching, and rearing through the early life stages of animals—finfish and shellfish in particular. Hatcheries produce larval and juvenile fish , shellfish , and crustaceans , primarily to support the aquaculture industry where they are transferred to on-growing systems, such as fish farms, to reach harvest size.
