Fluid mechanics - Wikipedia

A Newtonian fluid is a fluid in which the viscous stresses arising from its flow, at every point, are linearly correlated to the local strain rate—the rate of change of its deformation over time. That is equivalent to saying those forces are proportional to the rates of change of the fluid's velocity vector as one moves away from the point in question in various directions.

Fluid dynamics (or uid mechanics) is the study of the motion of liquids, gases and plasmas (e.g. water, air, interstellar plasma) which have no large scale structure and can be deformed to an unlimited extent (in contrast with solids). It is an old subject (Newton, Euler, Lagrange) but still a very active research area, e.g. astrophysical

Achieving strong adhesion between the interfaces of similar and dissimilar materials is highly desirable in various fields. However, the adhesion of common adhesives is diminished and even eliminated upon contact with water, because it prevents direct contact between the adhesive and adherend substrate and competes with the substrate surface groups to interact with the adhesive functional groups.

Solen, eller sola, (symbol:) er betegnelsen på stjernen som er
sentrum i solsystemet hvor Jorden og andre kjente objekter
(planeter, asteroider, meteoroider, kometer og støv) går i
bane rundt. Den er nesten perfekt kuleformet (sfærisk) og
består av varm plasma sammenvevd i magnetfelt.

Diameteren er ca. 1 392 000 km (ca. 109 ganger jordens).

Massen er ca. 2×10^{30} kg (ca. 333 000 ganger ...
