For a fluid in motion, the volume flow rate gives the volume of fluid that passes a cross section per unit time and is given by  $Av$ , where  $A$  is the cross-sectional area of the tube and  $v$  is the fluid speed. Bernoulli's equation is used to solve some problems. It relates conditions (density, fluid speed,

Chapter 2: Pressure and Fluid Statics Pressure For a static fluid, the only stress is the normal stress since by definition a fluid subjected to a shear stress must deform and undergo motion. Normal stresses are referred to as pressure  $p$ . For the general case, the stress on a fluid element or at a point is a tensor For a static fluid,
