I cup my hand around the tank and blow real hard 3-4 times down through the tank. :woohoo: It will blow almost all the coolant out of the engine system. When I do the Rotax 5 year rubber hose change and pull the coolant hoses off there is just a couple of table spoons left any where. Then put the coolant line back on radiator and fill it up.

SOLVED: Flushing a coolant system - Fixya  
A coolant flush and fill is basic maintenance for your vehicle's cooling system, and will help ensure maximum performance from your car, truck, or SUV. Since the heating system works off of the same coolant that circulates throughout your engine, performing a coolant flush and fill will also prevent overheating, the most common cause of breakdowns and internal engine damage.

Flushing Engine Coolant System - sunny-stories.tagency.co  
Normally the engine operates at 195F, unless you have replaced the thermostat with another one at 185F. If the temperature has a tendency to rise up, the reason is a partially obstructed cooling system or/and a bad thermostat.The first part of the cooling system that gives up is the heater core, because the coolant flowing channels are thin.

The tool bleeds the cooling system of air while simultaneously refilling the coolant. Follow the instructions that come with the tool to refill the cooling system with a 50/50 mix of fresh coolant. If you do not have access to an air compressor and vacuum fill tool, consult a repair manual or repair database for the cooling system bleeding instructions for your vehicle.

Engine Coolant Flush Process/Questions | SVTPerformance.com  
As the coolant temperature rises, the pressure in the coolant system increases, due to the expansion of the coolant. When the internal Pressure reaches six pounds per square inch, the relief valve in the overflow unit opens to prevent excessive build-up in the system. When the pressure falls below six psi, the relief valve closes.
