Great textbook for Materials Science classes. If combined with a great professor, this book is all you need to get an A. This book quickly and thoroughly goes over the chemistry of metals, ceramics, and polymers. There's a lot more advanced material, but i'm only 3 weeks into my course and this explains materials very well!

Description: Perhaps the best-known aspect of the behavior of metals, and indeed of most materials, is that they weaken with temperature. This weakening is however a problem in some applications. Only tungsten for instance, with its naturally high melting-point, was suitable for the manufacture of the filaments of incandescent light-bulbs.
