Harley-Davidson Motorcycle Fuel Injection Explained

It's more common in fuel injected engines for each cylinder to be primed at once, usually by an auxiliary fuel pump. Starting a hot, fuel injected engine can be tough. When you park a fuel injected airplane after flying, fuel can vaporize in the injector lines. Once you try to restart the hot engine, the cylinders initially may not receive the right amount of fuel in the mixture for combustion, because it's in a gas state.

Fuel Injected Harley Engines

Throughout the years, Harley-Davidson paired a carburetor with every engine the company produced, ranging from the older knucklehead, panhead and shovelhead engines to the newer Evolution and Twin Cam engines. However, fuel injection was offered as an option for Harley-Davidson's popular FL-series Touring motorcycles starting with the 1996 model year, but in 2007 became standard equipment on all Twin Cam engine models, which now included all Touring, Dyna and Softail models.
