CFD validation and grid sensitivity studies of full scale ...

Therefore, both experiments and CFD computations have degrees of uncertainty with the accuracy of the predictions of the flow parameters for full scale flows. This gives rise to the need for validation of both the measurements and computations for the prediction of such flows, in order to quantify the uncertainty levels.

VERIFICATION AND VALIDATION OF CFD SIMULATIONS

This article deals with the validation of the modelling and numerical simulation of a rowing stroke, by means of CFD. Simplified but realistic strokes were performed in a towing tank with a rotating arm and a real flexible oar. Those laboratory conditions are better controlled than those of in situ trials. An FSI procedure is developed to take into account the oar bending, which is essential ...
