Fuzzy Logic Type 1 and Type 2 Based on LabVIEW FPGA™, helps students studying embedded control systems to design and program those controllers more efficiently and to understand the benefits of using fuzzy logic in doing so.

Fuzzy logic - Wikipedia
Mamdani fuzzy inference is the most commonly seen fuzzy methodology and was among the first control systems built using fuzzy set theory. It was proposed in 1975 by Ebrahim Mamdani [1] as an attempt to control a steam engine and boiler combination by synthesizing a set of linguistic control rules obtained from experienced human operators.

Type-2 fuzzy sets and systems generalize standard Type-1 fuzzy sets and systems so that more uncertainty can be handled. From the very beginning of fuzzy sets, criticism was made about the fact that the membership function of a type-1 fuzzy set has no uncertainty associated with it, something that seems to contradict the word fuzzy , since that word has the connotation of lots of uncertainty.

Type-2 Fuzzy Logic System. •A type-2 FLS includes fuzzifier, rule base, fuzzy inference engine, and output processor. •The output processor includes type-reducer and defuzzifier: it generates a type-1 fuzzy set output (from the type-reducer) or a crisp number (from the defuzzifier).

type-2 fuzzy logic system Fig. 3 and a typein -1 system is represented just by the type-2 output processor. This last component in fact maps a type-2 fuzzy set into a type-1 fuzzy set with the type-reducer block and then transforms the fuzzy output in a crisp output with a defuzzifier block. Fig. 3. Fuzzy logic is a form of many-valued logic in which the truth values of variables may be any real number between 0 and 1 both inclusive. It is employed to handle the concept of partial truth, where the truth value may range between completely true and completely false.

All Answers (10) The concept of type-2 fuzzy sets (T2FSs) as an extension of the type-1 fuzzy sets (T1FSs) was first introduced in . Type-2 fuzzy sets can handle such uncertainties because their membership functions are fuzzy. A FLS described using at least one T2FS is called a type-2 fuzzy logic system (T2FLS).
