Genetic engineering, also called Genetic modification or
Genetic manipulation, is the direct manipulation of an
organism's genes using biotechnology. It is a set of
technologies used to change the genetic makeup of cells,
including the transfer of genes within and across species
boundaries to produce improved or novel
organisms. New DNA is obtained by either isolating and
copying the genetic ...***

Topics | GEN - Genetic Engineering and Biotechnology News

Critics of genetic engineering often claim that the absence of long-term tests of genetic engineering innovations means that they should not be introduced until these sorts of tests can be conducted. This sounds like a good and prudent approach, but if actually applied across the spectrum, this approach would have
