Geodatabase ...

These are typically defined as layer properties in ArcMap and specify how features are assigned map symbology (colors, fill patterns, line and point symbols) and text labels. Layers are not managed in geodatabases but are an important aspect in helping to define some key dataset properties in a geodatabase schema.

ArcGIS

Enterprise Architect and ArcGIS Diagrammer provide two different approaches to visualizing geodatabase designs for ArcGIS. While ArcGIS Diagrammer provides a detailed representation of the geodatabase and likely covers more of the ArcGIS feature set, Enterprise Architect uses the UML standard as its modeling notation.

ArcGIS Diagrammer is a productivity tool for GIS professionals to create, edit or analyze geodatabase schema. Schema is presented as editable graphics in an environment familiar to users of Microsoft Visual Studio.

ArcGIS Diagrammer - Demonstration Video

ArcGIS Diagrammer is kaput after 10.2 and never was better than the other options in my opinion, and Geodatabase Diagrammer is awesome, but getting it to work is nightmare. Little documentation to work through all the bugs/install process and confusing blog entries and multiple versions makes what should be a simple process turn into a wasted day.
