The difference is that, since an inequality shows a set of values greater than or less than, your graph will show more than just a dot on a number line or a line on a coordinate plane. By using algebra and evaluating the inequality sign, you can determine which values are included in the solution of an inequality.

Absolute Value Graph: Method to get Piecewise

Function: We see that our “boundary line” is at $(x=0)$, so what’s inside the absolute value sign must be (x) or a factor of (x) . (This is because to get the boundary line with an absolute value function, we set what’s inside the absolute value to 0, and solve for (x)).
