Pollution of surface water can cause degradation of ground-water quality and conversely pollution of ground water can degrade surface water. Thus, effective land and water management requires a clear understanding of the linkages between ground water and surface water as it applies to any given hydrologic setting.

GROUND-WATER HYDROLOGY Ground-water supplies are obtained from aquifers, which are subsurface units of rock and unconsolidated sediments capable of yielding water in usable quantities to wells and springs. The hydrologic characteristics of aquifers and natur-al chemistry of ground water determine the availability and suitability of ground-water resources for specific uses. Ground-Water Resources

Ground and Surface Water Hydrology | Hydrology (Civil ...

Hydrogeology (hydro- meaning water, and -geology meaning the study of the Earth) is the area of geology that deals with the distribution and movement of groundwater in the soil and rocks of the Earth's crust (commonly in aquifers). The terms groundwater hydrology, geohydrology, and hydrogeology are often used interchangeably.

Groundwater Groundwater, water that occurs below the surface of Earth, where it occupies all or part of the void spaces in soils or geologic strata. It is also called subsurface water to distinguish it from surface water, which is found in large bodies like the oceans or lakes or which flows overland in streams.

NATURAL PROCESSES OF GROUND-WATER AND SURFACE-WATER ... - USGS

Ground water is part of the hydrologic cycle (see Reference Sheet 10.1, Watershed Function [ANR Publication 8064]). Aquifers are recharged from precipitation, seep-age from rivers, and seepage from irrigated fields. If no one pumps the ground water, aquifers eventually “ overflow; ” that is, they discharge water to the surface through

Basic Concepts of Groundwater Hydrology

When surface water seeps into the ground above bedrock, it is categorized as groundwater, and the rate at which this occurs determines baseflow needs for instream flow, as well as subsurface water levels in wells. While groundwater is not part of surface-water hydrology, it must be taken into account for a full understanding of the behaviour of surface water.
