Video: Use Guide Grids to Align Views
| Revit Products ...

Revit has a tool for this called the Guide Grid. It is a slightly odd little tool that allows you to line up model elements in the same location across multiple sheets. It does this by allowing you to move the viewport on a sheet by snapping to the datum elements in your model (levels, column grids and reference planes) and then snapping them to the intersections on the Guide Grid.

Revit OpEd: Guide Grids

Yeah, I just can't think of a really good use for Guide Grids. Our TB grids match the cell division of the TB so probably most teams won't snap a view directly to our "grids" but you

usability. Of course, your usage will depend on your models but this is guidance to help guide your implementation.

Guide Grid in Revit | RevitConnection
Robert Manna recently posted some observations about the new Guide Grid feature that arrived with Revit 2011. It is intended to provide a bit more control over the view alignment between sheets. I complained about this process in an earlier post. It was only a month or so later that I saw a sneak peak of the Guide Grid concept.

assign it to sheet views. Resize and move the guide grid and change its spacing. Apply a guide grid to multiple sheets. Modify the guide grid and see the changes reflected in all sheets to which the guide grid was applied. Snap grid and level datums to a guide ...

Revit Guide Grids - Paul F. Aubin
Guide grids help arrange views so that they appear in the same location from sheet to sheet. You can display the same guide grid in different sheet views. Guide grids can be shared between sheets. When new guide grids are created, they become available in the instance properties of sheets and can be applied to sheets. It is recommended to create only a few guide grids and then apply them to sheets
