Mathematical Models: Mechanical Vibrations, Population ...
Unlike many modeling courses that use a textbook that focuses on one kind of mathematical model, this course will cover a broad spectrum of modeling problems, from optimization to dynamical systems to stochastic processes. Part of the course will use the textbooks by Mark Meerschaert and Richard Haberman. Both have titles of Mathematical models.

It utilizes the solutions of a series of Riemann problems at cell boundaries to construct approximate solutions of the non-equilibrium traffic flow model under general initial conditions. In [3], the authors consider a mathematical model for fluid dynamic flows on networks which is based on conservation laws.
