Among the dozens and dozens of linear algebra books that have appeared, two that were written before 'dumbing down' of textbooks became fashionable are especially notable, in my opinion, for the clarity of their authors' mathematical vision: Paul Halmos's Finite-Dimensional Vector Spaces [6] and Ho man and Kunze's Linear Algebra [8].

Finite-Dimensional Vector Spaces by Paul R. Halmos
The concept of a vector space is a special case of the concept of a module over a ring \mathbb{R} a vector space is a unitary module over a field. A unitary module over a non-commutative skew-field is also called a vector space over a skew-field; the theory of such vector spaces is much more difficult than the theory of vector spaces over a field.

As a newly minted Ph.D., Paul Halmos came to the Institute for Advanced Study in 1938—even though he did not have a fellowship—to study among the many giants of mathematics who had recently joined the faculty. He eventually became John von Neumann's research assistant, and it was one of von Neumann's inspiring lectures that spurred Halmos to write Finite Dimensional Vector Spaces.
