Build a Powerful Hand Pump From Scratch with PVC Pipe

Hand pumps are manually operated pumps; they use human power and mechanical advantage to move fluids or air from one place to another. They are widely used in every country in the world for a variety of industrial, marine, irrigation and leisure activities. There are many different types of hand pump available, mainly operating on a piston, diaphragm or rotary vane principle with a check valve on the entry and exit ports to the chamber operating in opposing directions. Most hand pumps are either

Hand Water Pumps | Northern Tool + Equipment

The hand pump concept: There are only three components that make up a hand pump: the piston, the inlet check valve, and the outlet check valve. The key is how to make each of them. You need water to flow in one direction and not the other. A check valve is designed to do just that. One check valve is in the hose from your water source to your pump.
