haproxy - Docker Hub

HAProxy(High Availability Proxy) is an open source load balancer which can load balance any TCP service. It is particularly suited for HTTP load balancing as it supports session persistence and layer 7 processing.

How to install and setup HAProxy on Ubuntu 16.04 ...

Consul provides both a DNS and HTTP interface for doing service discovery. This works for broad set of uses, but latency sensitive or high-throughput applications can benefit from reducing the overhead of service discovery by using a client-side load balancer such as HAProxy. It's simple to provide a configuration template for HAProxy and have it dynamically ...

SharePoint - HAProxy reverse-proxy (issue with SSL ...

When this option is set, haproxy will systematically send a special header "X-Haproxy-Server-State" with a list of parameters indicating to each server how they are seen by haproxy. This can be used for instance when a server is manipulated without access to haproxy and the administrator sees it up or not, or if the server is the last one in a farm.

How To Use HAProxy to Set Up HTTP Load Balancing on an ...

HAProxy is : - a TCP proxy : it can accept a TCP connection from a listening socket, connect to a server and attach these sockets together allowing traffic to flow in both directions; - an HTTP reverse-proxy (called a "gateway" in HTTP terminology) : it presents itself as a server to the client, accepts connections, is accepted on a listening TCP socket, and passes the requests from these ...
