Paul Cobbaut - linux-training.be

Display the first few lines of a file in Unix. Use the Unix head command to read the first few lines of an input file and send them to standard output (that is, your terminal screen). The format for the head command is: `head -lines filename`. In this example, lines is an optional value specifying the number of lines to be read. If you don't give a number, the default value of 10 is used.
