Super-resolution microscopy is a series of techniques in optical microscopy that allow such images to have

resolutions higher than those imposed by the diffraction limit, which is due to the diffraction of light. Super-resolution imaging techniques rely on the near-field (photon-tunneling microscopy as well as those that utilize the Pendry Superlens and near field scanning optical microscopy ...

Nikon's N-STORM systems utilize the astigmatic approach as applied by the laboratory of Xiaowei Zhuang for 3D STORM imaging, yielding approximately 50-90 nm axial resolution over a range of about 1 micrometer (μm) for the N-STORM, and 4+ μm for the N-STORM 4.0 by using a proprietary focus offset mechanism to perform z stepping.

Forests worldwide are in a state of flux, with accelerating losses in some regions and gains in others. Hansen et al. (p. [850][1]) examined global Landsat data at a 30-meter spatial resolution to characterize forest extent, loss, and gain from 2000 to 2012. Globally, 2.3 million square kilometers of forest were lost during the 12-year study period and 0.8 million square kilometers of new ...

Sting jets are cores of very high wind speeds found in some cyclones and require high-resolution models in order to be adequately represented. While STORM is an excellent localization-based super-resolution technique, its use for live imaging is limited, mainly due to phototoxicity issues. In this case, PALM microscopy , which uses different photoactivatable fluorophores, is better suited for live imaging and single-particle tracking .

Photo-activated localization microscopy (PALM or FPALM) and stochastic optical reconstruction microscopy (STORM) are widefield (as opposed to point scanning techniques such as laser scanning confocal microscopy) fluorescence microscopy imaging methods that allow obtaining images with a resolution beyond the diffraction limit. The methods

Storm surge is the unusual rise of water that happens during a big tropical storm. When the water rises, dangerous flooding can happen near the coast. Storm

surges are not the same as high tides, but when a storm surge happens during a high tide, it can result in even higher water. Sometimes the water can rise as many as 20 feet.
