So if there is only one negative eigenvalue, then we only get a single curve of such solutions, but if there are two eigenvalues with negative real parts, we get a whole open set of such solutions and so there is no conjugacy. Page 86, last line: first component of  $V$  should be  $x + iy$ . Page 88, line 18 Section 5.1, not 5.2.

The Poincaré-Bendixson theorem plays an important role in the study of the qualitative behavior of dynamical systems on the plane; it describes the structure of limit sets in such systems. We prove a version of the Poincaré-Bendixson Theorem for two dimensional hybrid dynamical systems and describe a method for computing the derivative of the Poincaré return map, a useful object for the ...

The Lorenz system is a system of ordinary differential equations first studied by Edward Lorenz. It is notable for having chaotic solutions for certain parameter values and initial conditions. In particular, the Lorenz attractor is a set of chaotic solutions of the Lorenz system. In popular media the 'butterfly effect' stems from the real-world implications of the Lorenz attractor, i.e. that in ...
